Bilateral Meetings

- 19-11-2015 (12:00 a.m. to 7 p.m.)
- 20-11-2015 (10:00 a.m. to 7 p.m.)
- 21-11-2015 (10:00 a.m. to 7 p.m.)

Description

The company manufactures fiber cement artifacts for the construction sector and application in roofing and cladding. The asbestos cement used by the company has exceptional technical characteristics because it is unputrefiable, incombustible, resistant to insects, bacteria and fungi and resistant to oxidation. It is also waterproof and resistant to extreme temperature ranges, corrosion, bending, compression and traction. These features, combined with their long lifetime, low maintenance and the fact that it only weighs 70% of the same volume of precast concrete makes fiber cement extremely economical and versatile.
